Target Corporation - Water Security 2020

W0. Introduction

W0.1

(W0.1) Give a general description of and introduction to your organization.

Minneapolis-based Target Corporation (NYSE:TGT) serves guests at 1,868 stores and via Target.com. Since 1946, Target has given 5 percent of its profit to communities. For more information about Target’s commitment to corporate responsibility, visit https://corporate.target.com/corporate-responsibility/.

CDP system functionality only allows for 365 days to be reflected in the start and end date fields below. The results contained in this CDP survey are for Target’s fiscal year 2019 (Feb. 3, 2019 through Feb. 1, 2020), which consisted of only 364 days.

Target considers multiple factors in evaluating risk. Target considers risks substantive when they are assessed to be high or critical using proprietary criteria. Importantly, something that has a “substantive financial or strategic impact on our business” is not necessarily “material” to investors as defined by the SEC.

Target’s answers to this questionnaire contain forward-looking statements, which are based on our current assumptions and expectations. These statements are typically accompanied by the words “expect,” “may,” “could,” “believe,” “would,” “might,” “anticipates,” or similar words. All such forward-looking statements are intended to enjoy the protection of the safe harbor for forward-looking statements contained in the Private Securities Litigation Reform Act of 1995, as amended. Although we believe there is a reasonable basis for the forward-looking statements, our actual results could be materially different. The most important factors which could cause our actual results to differ from our forward-looking statements are set forth in our description of risk factors in Item 1A of our Form 10-K for the fiscal year ended February 1, 2020, which should be read in conjunction with the forward-looking statements in this report. Forward-looking statements speak only as of the date they are made, and we do not undertake any obligation to update any forward-looking statement.

W0.2

(W0.2) State the start and end date of the year for which you are reporting data.

<table>

(W0.3) Select the countries/areas for which you will be supplying data.

- China
- India
- Singapore
- United States of America
- Viet Nam

W0.4

(W0.4) Select the currency used for all financial information disclosed throughout your response.

USD

W0.5

(W0.5) Select the option that best describes the reporting boundary for companies, entities, or groups for which water impacts on your business are being reported.

Companies, entities or groups over which operational control is exercised
Within this boundary, are there any geographies, facilities, water aspects, or other exclusions from your disclosure?
Yes

W0.6a

Please report the exclusions.

<table>
<thead>
<tr>
<th>Exclusion</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-US facilities</td>
<td>Our current disclosure does not include our administrative and operational facilities outside of the United States (buildings in India, and several small offices scattered around the globe). These facilities are currently excluded due to a lack of reliable data on water consumption. Based on estimates of potential consumption from all of these sources, they are considered de minimis and would likely contribute a normal portion to our total consumption.</td>
</tr>
</tbody>
</table>

W1. Current state

W1.1

Rate the importance (current and future) of water quality and water quantity to the success of your business.

<table>
<thead>
<tr>
<th></th>

</thead>
<tbody>
<tr>
<td>Sufficient amounts of good quality freshwater available for use</td>
<td>Important</td>
<td>Important</td>
<td>We will focus our freshwater stewardship efforts in areas and on issues where our influence and support can help deliver the greatest impact. Our water risk assessment has highlighted where properties and parts of our supply chain are exposed to high risk and our stores and the communities they sit within are dealing with record-level droughts and flooding in certain basins.</td>
</tr>
<tr>
<td>Sufficient amounts of recycled, brackish and/or produced water available for use</td>
<td>Have not evaluated</td>
<td>Have not evaluated</td>
<td>Many of our stores are designed with storm water systems in the parking lot and grounds to collect and clean rainwater before it flows into the ground. We complement the native landscapes with features like rain gardens that naturally slow and clean storm water runoff and mitigate flooding. Given Target's growing interest in freshwater stewardship, we anticipate evaluating the use of recycled, brackish and/or produced water in the future. We continued to work toward incorporating native landscaping in the landscape areas of new U.S. stores; this work began in 2015. Realizing the potential for changes to water availability around the world, we also set a goal to reduce our water consumption by 15 percent for our stores, distribution centers, and headquarters locations in the U.S. by 2025. We report progress toward this goal in our annual Corporate Responsibility Report.</td>
</tr>
</tbody>
</table>

W1.2
Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

W1.4

Do you engage with your value chain on water-related issues?

Yes, our suppliers

W1.4a

What proportion of suppliers do you request to report on their water use, risks and/or management information and what proportion of your procurement spend does this represent?

Row 1

% of suppliers by number
76-100

% of total procurement spend
Unknown

Rationale for this coverage
Target requires environmental data inclusive of water use and management from all Tier 1 factories that produce Target owned brand product as well as Tier 2 factories.

Impact of the engagement and measures of success
Target utilizes this data to inform participation in water efficiency programs and to prioritize our engagement on water quality and use with our manufacturing supply chain. To date we have worked with Target’s owned-brand suppliers via improvement programs to increase their water efficiency resulting in over 68 billion liters of water savings.

Comment
We require all of our Tier 1 factories that produce Target owned brand product as well as Tier 2 factories to complete the Higg FEM self-assessment annually (except those regulated by FDA), which is considered as Target reports on our water use, risks and management information. To date we have worked with Target’s owned-brand suppliers via improvement programs to increase their water efficiency resulting in over 6.8 million cubic meters of water savings.
W1.4b Provide details of any other water-related supplier engagement activity.

**Type of engagement**
Onboarding & compliance

**Details of engagement**
Inclusion of water stewardship and risk management in supplier selection mechanism
Requirement to adhere to our code of conduct regarding water stewardship and management

**% of suppliers by number**
76-100

**% of total procurement spend**
Unknown

**Rationale for the coverage of your engagement**
All Tier 1 factories that produce Target owned brand product (except those FDA regulated) as well as Tier 2 factories are required to complete the Higg FEM self-assessment annually.

**Impact of the engagement and measures of success**
Target ensures all owned-brand products are compliant with local regulations prior to production. We do this through our pre-production audit by asking specific questions to validate our water standard within Target’s Standards Of Vendor Engagement (SOVE) LINK: https://corporate.target.com/corporate-responsibility/responsible-sourcing/social-compliance/standards-of-vendor-engagement

**Comment**

---

**Type of engagement**
Innovation & collaboration

**Details of engagement**
Encourage/incentivize innovation to reduce water impacts in products and services
Encourage/incentivize suppliers to work collaboratively with other users in their river basins
Educate suppliers about water stewardship and collaboration

**% of suppliers by number**
Unknown

**% of total procurement spend**
Unknown

**Rationale for the coverage of your engagement**
Target works with high impact owned-brand suppliers in China, Vietnam, Taiwan, India and Cambodia to improve on innovation and water efficiency. We collaborate with the industry and NGOs like WWF, the Apparel Impact Institute and the International Finance Corporation to scale local supply chain efforts and create awareness through joint projects.

**Impact of the engagement and measures of success**
WWF China Water Stewardship Taihu Program: In 2019, 4 supplier trainings collaboratively held in the Taihu region had a total of 122 textile mills participating. We extended our partnership with WWF to Moradabad, India in piloting water saving technology for the electroplating process in one of our brassware factories. Vietnam Improvement Program (VIP): Since 2016, we have collaborated with the IFC to create the Vietnam Improvement Program (VIP) which aims to promote green manufacturing in Vietnam, focused on footwear and apparel. In 2019, the program expanded to Cambodia while maintaining in Vietnam to include additional 23 facilities, bringing the participating total to 58 factories. Clean by Design: In 2018/19, 30 participating fabric mills in China and Taiwan were able to achieve a final 20% water saving which equals to over 3.5 million cubic meters. In 2019, we expanded our CBD work to India and are engaging a total of 27 textile mills on energy and water efficiency initiatives

**Comment**
For the Taihu program, suppliers learned about water stewardship on policy updates, standards, technologies and water risk analysis. As a long-term supporter of NRDC – now the Apparel Impact Institute – in driving the Clean by Design (CBD) initiative, we collaborate with our supply chain to minimize the environmental impacts of textile mills.

---

**W2. Business impacts**

---

**W2.1**

(W2.1) Has your organization experienced any detrimental water-related impacts?

Yes

---

**W2.1a**
(W2.1a) Describe the water-related detrimental impacts experienced by your organization, your response, and the total financial impact.

**Country/Area & River basin**

| United States of America | Not known |

**Type of impact driver & Primary impact driver**

| Physical | Severe weather events |

**Primary impact**

Disruption to sales

**Description of impact**

Target tracks its costs in inventory and property damages from extreme weather events, such as hurricanes, lightning strikes, cyclones, rain and hail storms, wildfires, earthquakes, etc. From 2011 through 2018, the cost to Target of inventory and property damage due weather-related events has been about $170 million, with annual losses ranging from about $6 million to about $55 million per year. The most significant costs have been the result of hurricanes, floods, and rain and hail storms. As the frequency and severity of these types of extreme weather events are expected to increase in both the 2°C and 4°C scenarios, Target can expect that these costs will increase over time.

**Primary response**

Other, please specify (We cannot control severe weather events)

**Total financial impact**

Uncharacteristic or significant weather conditions can affect consumer shopping patterns, particularly in apparel and seasonal items, which could lead to lost sales or greater than expected markdowns and adversely affect our short-term results of operations. In addition, our three largest states by total sales are California, Texas and Florida, areas where natural disasters are more prevalent. Natural disasters in those states or in other areas where our sales are concentrated could result in significant physical damage to or closure of one or more of our stores, distribution centers or key vendors, and cause delays in the distribution of merchandise from our vendors to our distribution centers, stores, and guests, which could adversely affect our results of operations by increasing our costs and lowering our sales.

---

(W2.2) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations?

No

---

(W3.3) Does your organization undertake a water-related risk assessment?

Yes, water-related risks are assessed

---

(W3.3a) Select the options that best describe your procedures for identifying and assessing water-related risks.

WWF Water Risk Filter

Comment
Target engaged WWF to conduct a Water Risk Assessment to review our water use reduction efforts across our manufacturing supply chain, stores and distribution facilities. This helped us develop a holistic approach that acknowledges water as part of a bigger global system of megatrends. Our plan is ambitious, so we will focus our efforts in four main areas (Raw Materials; Manufacturing; Direct Operations; and Beyond the Fenceline). We also used the WRI Aqueduct tool to evaluate U.S. stores, distribution centers, and headquarter facilities. We identified that 50.5% of our water withdrawals occur at locations in stressed areas. This is about the same last year's reported number of 51%.

<td>Target includes this information as a key aspect to understanding our physical water risk. The Water Risk Filter provides a number of indicators that look at various aspects of water availability within basins. This is paramount for our business to understand regions where vulnerability to drought and flood might require additional staff attention and investment of resources. Further, risk assessment also provides insights on temporal scarcity to help us understand when water availability issues might be most acute for our properties, key manufacturing supply chains and critical raw materials.</td>

(W3.3d) Describe your organization’s process for identifying, assessing, and responding to water-related risks within your direct operations and other stages of your value chain.

We believe clean, drinkable water and sanitation are human rights and should be accessible for all. Healthy ecosystems and sustainable water management are essential in the delivery of these basic rights. Water is important to the success of our business operations, from our supply chains to our stores and the communities within which we operate.

Target stores and distribution centers make up a majority of our direct operational facilities in the United States. Target previously engaged in a multiyear collaboration with World Wildlife Fund (WWF). In 2017, WWF mapped Target’s U.S. stores and distribution centers as well as our owned-brand manufacturing locations using the WWF Water Risk Assessment to understand our enterprise risks and help build a more comprehensive strategy and goal roadmaps related to freshwater stewardship. The Water Risk Filter identified that 22% of Target’s store water withdrawals were in areas of high stress. In 2018, Target expanded our risk analysis to include evaluating our headquarters locations along with our stores, and distribution centers. To align with the GRI standards, we have changed our analysis and because of this, our reported water withdrawal from stressed areas has increased from 2017. Using the WRI Aqueduct tool, Target has identified that 51% of our water withdrawal is in stressed areas. Conducting the water risk assessment has helped us focus our U.S. direct operation's conservation programs and capital expenditures at facilities where there is potential for higher water risk or scarcity in the future.

The information helped support our decision in scaling local supply chain efforts through collaborative work in strategic locations that are facing high water risks. In addition to WWF, we continue to work with our suppliers to understand and reduce water consumption within our supply chain through our partnership with the Apparel Impact Institute and the International Finance Corporation. In 2019, we also used the water risk information that we gleaned from our assessment to embark upon multi-stakeholder collaborations in our agricultural supply chain, including launching a Field to Market focused on soil health as part of supporting regenerative agriculture and improving water quality outcomes in Nebraska.

We used World Wildlife Fund’s (WWF) water risk assessment to review our water use reduction efforts across our manufacturing supply chain, stores and distribution facilities. This helped us develop a holistic approach that acknowledges water as part of a bigger global system of megatrends. Our plan is ambitious, so we will focus our efforts in four main areas (Raw Materials; Manufacturing; Direct Operations; and Beyond the Fenceline) where we can make the greatest impact, with initial goals to guide our progress. Our initial goals are meant to impact three primary outcomes: improving water quality, making water use more efficient and increasing access to clean water.

We are collaborating with NGOs, including WWF, to further our water stewardship efforts. We are testing the ability to scale local supply chain efforts through joint work on textiles in China’s Taihu basin. We also joined the Ceres Connect the Drops Campaign and the AgWater Challenge to advance water stewardship efforts in California. Target recently joined the Zero Discharge of Hazardous Chemicals (ZDHC) organization, and we plan to use its wastewater guidelines for our 2025 manufacturing goal for water related to owned-brand apparel textile facilities. The guidelines were designed to help companies reduce unwanted chemicals in manufacturing and prevent them from being discharged in wastewater and impacting surrounding communities. For millions around the world, access to funds stand between them and safe water in their homes, so we have launched a collaboration with Water.org. Through an initial $1 million investment, we will work together to empower people in communities where our goods are produced, enhancing their lives by removing barriers to access affordable financing for water and sanitation. We will continue water conservation work that is already in progress too, like our recent efforts with Conserva Irrigation to optimize the outdoor irrigation systems at our stores. This has already saved more than 40 million gallons of water at the 270 stores in the program at the end of 2018.

We anticipate continuing to work with these entities to further refine and focus our freshwater stewardship efforts in areas and on issues where our influence and support can help deliver the greatest impact.

W4. Risks and opportunities

W4.1

(W4.1) Have you identified any inherent water-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes, both in direct operations and the rest of our value chain
How does your organization define substantive financial or strategic impact on your business?

Target considers multiple factors in evaluating risk. Target considers risks substantive when they are assessed to be high or critical using proprietary criteria. Importantly, something that has a “substantive financial or strategic impact on our business” is not necessarily “material” to investors as defined by the SEC.

Target’s answers to this questionnaire contain forward-looking statements, which are based on our current assumptions and expectations. These statements are typically accompanied by the words “expect,” “may,” “could,” “believe,” “would,” “might,” “anticipates,” or similar words. All such forward-looking statements are intended to enjoy the protection of the safe harbor for forward-looking statements contained in the Private Securities Litigation Reform Act of 1995, as amended. Although we believe there is a reasonable basis for the forward-looking statements, our actual results could be materially different. The most important factors which could cause our actual results to differ from our forward-looking statements are set forth in our description of risk factors in Item 1A of our Form 10-K for the fiscal year ended February 1, 2020, which should be read in conjunction with the forward-looking statements in this report. Forward-looking statements speak only as of the date they are made, and we do not undertake any obligation to update any forward-looking statement.

(W4.1b) What is the total number of facilities exposed to water risks with the potential to have a substantive financial or strategic impact on your business, and what proportion of your company-wide facilities does this represent?

<table>
<thead>
<tr>
<th>Total number of facilities exposed to water risk</th>

W6.5

(W6.5) Do you engage in activities that could either directly or indirectly influence public policy on water through any of the following?

Yes, other

W6.5a

(W6.5a) What processes do you have in place to ensure that all of your direct and indirect activities seeking to influence policy are consistent with your water policy/water commitments?

In 2017, we collaborated with World Wildlife Fund (WWF) on a water risk assessment of our water reduction efforts across our supply chain, stores and distribution centers. As a result, in early 2018 we announced a holistic approach to freshwater stewardship that acknowledges water as part of a bigger global system linked to other megatrends such as climate change, rapid urbanization and population growth. Target's Water cross-functional team worked closely with our Government Affairs staff to ensure they were briefed and understand the new Freshwater approach as it relates to policy.

We are collaborating with NGOs, including WWF, to further our water stewardship efforts in local basins. We continue to scale local supply chain efforts through joint work on textiles in China’s Taihu basin. In 2019, we extended our collaboration with WWF to Moradabad, India to pilot water saving technology for the electroplating process in one of our brassware factories. In 2018, we also joined Ceres’ Connect the Drops campaign as part of our commitment to advancing water solutions that sustainably manage California’s stressed water supplies.

Target joined the Zero Discharge of Hazardous Chemicals (ZDHC) organization in 2018, and we have adopted its wastewater guidelines for our 2025 water manufacturing goal. The guidelines were designed to help companies reduce unwanted chemicals in manufacturing and prevent them from being discharged in wastewater and impacting surrounding communities.

W6.6

(W6.6) Did your organization include information about its response to water-related risks in its most recent mainstream financial report?

No, and we have no plans to do so

W7. Business strategy

W7.1
W7.1 Are water-related issues integrated into any aspects of your long-term strategic business plan, and if so how?

<table>
<thead>
<tr>
<th>Are water-related issues integrated?</th>
<th>Long-term time horizon (years)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Long-term business objectives</td>
<td>Yes, water-related issues are integrated 5-10</td>
<td>The water risk assessment has underscored the importance of contextualizing publicly stated goals so that resources and focus are on basins with the greatest risk. As significant growth or change in the business occurs, Target will revisit its risk assessment to ensure it remains relevant and comprehensive.</td>
</tr>
<tr>
<td>Strategy for achieving long-term objectives</td>

W7.3 Does your organization use climate-related scenario analysis to inform its business strategy?

<table>
<thead>
<tr>
<th>Use of climate-related scenario analysis</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Row 1</td>
<td>Yes</td>
</tr>
</tbody>
</table>

We continue to explore connections between water and climate (i.e. mitigation, adaptation) and are considering the role water stewardship can play in long-term business resilience. We recognize the long-term impacts climate change and carbon regulations have on our business. We now examine environmental impacts embedded within our supply chain to understand our exposure to climate change. In addition to our climate policy, goals, and updated carbon-reduction goals to encompass Scope 3 emissions, we also completed our TCFD Climate risk analysis for the first time in 2019. We have also joined other companies in the BSR Value Chain Risk to Resilience working group to best determine our strategy to more comprehensively integrate climate risk into our core business practices. Although we have taken many steps on our journey of risk mitigation, we are working to better understand how to most efficiently implement more resilient business strategies going forward.

W7.3a Has your organization identified any water-related outcomes from your climate-related scenario analysis?

Yes

W7.3b
(W7.3b) What water-related outcomes were identified from the use of climate-related scenario analysis, and what was your organization’s response?

<table>
<thead>
<tr>
<th>Climate-related scenarios and models applied</th>
<th>Description of possible water-related outcomes</th>
<th>Company response to possible water-related outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other, please specify (RCP 4.5, SSP2, SSP3)</td>
<td>As part of our scenario analysis for climate-related whole business impacts, we used the WRI Aqueduct tool to highlight water-related risks and opportunities. The WRI Aqueduct tool generates projections for future water stress, seasonal water variability, water supply and water demand, which are informed by two different climate-related scenarios, RCP 4.5 and SSP-3, and two shared socioeconomic pathways, SSP2 and SSP3. For our top five geographical markets (based on revenue), we reviewed and analyzed the above indicators against two pathways (BAU and optimistic) and two time scales (to 2020 and to 2040). We also analyzed locations that are integral to our supply chain to understand how the raw materials in our products might be affected, e.g., the risk of water stress in cotton-producing regions of Texas. The outcomes vary depending on the level of optimism assigned to them, as well as the time scale. Results of our analysis reveal, for example, changes in water stress southern US states under business-as-usual and optimistic conditions to 2040. Outcomes could impact Target in a variety of ways. In areas prone to drought, for example, water use restrictions could impact the whole of Target’s value chain from raw material production to operational facilities, to downstream use of products that require water, e.g., shampoo, laundry detergent, etc. Both the BAU and optimistic scenarios revealed water-related risks for our operations and supply chain. We recognize the tension between protecting this critical natural resource and needing it to operate our business. To address this, Target has established a water-related goal of an absolute water reduction by 15 percent in stores, distribution centers, and headquarters locations by 2025. Additionally, created together with World Wildlife Fund (WWF), our freshwater stewardship framework takes a holistic approach by incorporating our existing water management aspirations as well as our work in climate change, chemicals management and sustainable resource use. We are working to address the impacts of growing the raw materials we need to produce products, from grocery items to cotton fibers. One such effort is our strategic collaboration with the Better Cotton Initiative (BCI). BCI Farmers are trained to use water efficiently and reduce their use of the most harmful chemicals. We joined the ZDHC Roadmap to Zero Programme and plan to use its wastewater guidelines as we set our 2025 manufacturing water goal. Across our stores, distribution centers and headquarters, we are addressing water scarcity, water quality compliance and storm water flows.</td>
<td></td>
</tr>
</tbody>
</table>

W7.4

(W7.4) Does your company use an internal price on water?

Row 1

Does your company use an internal price on water?

No, but we are currently exploring water valuation practices

Please explain

Target is working to better understand the true cost of water and will be looking at its impact on our business.

W8. Targets

W8.1

(W8.1) Describe your approach to setting and monitoring water-related targets and/or goals.

<table>
<thead>
<tr>
<th>Levels for targets and/or goals</th>
<th>Monitoring at corporate level</th>
<th>Approach to setting and monitoring targets and/or goals</th>
</tr>
</thead>
<tbody>
<tr>
<td>Company-wide targets and goals</td>
<td>Targets are monitored at the corporate level</td>
<td>Target launched our corporate Freshwater Stewardship Approach in March 2018. (LINK: <a href="https://corporate.target.com/corporate-responsibility/planet/water">https://corporate.target.com/corporate-responsibility/planet/water</a>) We have focused our efforts and set initial goals in four key areas where we can make the most impact: 1. Raw Materials: Our water footprint starts with growing the raw materials needed to produce our products, such as food and fiber, so we are working to better understand our basin-level impacts to prioritize our responses. 2. Manufacturing: Working in our areas of greatest impact, we’ll enable our owned-brand manufacturers to do more with less water where local conditions demand, and aim for net-positive water quality outcomes in priority watersheds for people and nature. 3. Direct Operations: Across our stores, distribution centers and headquarters locations, we are taking action to reduce water scarcity, improve water quality outcomes and manage stormwater flows. 4. Beyond the Fenceline: We’ll work with others around the world to encourage progress in the areas above and beyond our own business and operations, through cross-sector partnerships, team member engagement, philanthropic investments and more. We are now working thoughtfully on ensuring we have good monitoring in place to track progress on the goals that have been set.</td>
</tr>
</tbody>

W8.1a

(W8.1a) Provide details of your water targets that are monitored at the corporate level, and the progress made.

Target reference number

Target 1

Category of target

Water withdrawals

Level

Site/facility

Primary motivation

Water stewardship

Description of target

By 2025: absolute water reduction by 15 percent in stores, distribution centers, and headquarters locations

Quantitative metric

CDP
% reduction in total water withdrawals

Baseline year
2010

Start year
2017

Target year
2025

% of target achieved
14.5

Please explain
For our U.S. direct operations, including stores, distribution centers, and headquarters locations, we are taking action to reduce water scarcity, improve water quality outcomes and manage stormwater flows. It is important work that will help ensure the communities where we do business have clean, safe water for generations to come. We have implemented different programs across our operations, including retrofitting restrooms with more efficient fixtures, incorporating native landscaping, and optimizing irrigation systems through an irrigation efficiency program. We have made significant progress while also helping lead the rest of the retail industry in this space. In 2019, we used 2,902,429,010 gallons. This equates to a 14.5% reduction from our 2010 usage baseline.

Level
Business activity

Primary motivation
Water stewardship

Description of target
By 2025, we will design 100 percent of garment-washed owned-brand apparel utilizing water-saving design principles.

Quantitative metric
Other, please specify (Percentage of garment-washed owned-brand apparel using water-saving design principles)

Baseline year
2018

Start year
2018

Target year
2025

% of target achieved
49.1

Please explain
In 2019, 49.1% of our SKUs of garment-washed owned-brand apparel, inclusive of our denim and non-denim categories, utilized water-saving design principles.
(W8.1b) Provide details of your water goal(s) that are monitored at the corporate level and the progress made.

Goal
Other, please specify (Understand our position on water quality)

Level
Company-wide

Motivation
Commitment to the UN Sustainable Development Goals

Description of goal
Over the next 24 months, we'll seek to understand Target's position on water quality within our U.S. building operations.

Baseline year
2017

Start year
2017

End year
2019

Progress
In early 2020, we announced a new commitment to water quality. Water quality is a growing risk in the U.S. and as water quality is ever-changing in regions across the country, Target will continue to operate and maintain best practices in managing storm water and the quality of water leaving our sites. We will do this by building local relationships with watershed managers to improve green infrastructure and refining our salt application practices at stores in snow states to reduce the amount of chloride entering local water bodies. With our large operational footprint across the U.S., we can work to improve water quality in multiple areas of the country.

Goal
Other, please specify (Complying with ZDHC standards)

Level
Business activity

Motivation
Commitment to the UN Sustainable Development Goals

Description of goal
By 2025, all owned-brand apparel textile facilities comply with Zero Discharge of Hazardous Chemicals (ZDHC) Progressive level wastewater standard.

Baseline year
2018

Start year
2018

End year
2025

Progress
In early 2019 we met with ZDHC to develop an implementation plan and roadmap to achieve this goal by 2025. We began mapping the wastewater performance with our strategic apparel suppliers in October 2019 and are looking to scale up to broader apparel during 2020.
