

TARGET CLIMATE POLICY

Target acknowledges the scientific consensus that the climate is changing, that our business is contributing to that change, and that our supply chain, operations, and customers will continue to be impacted by the effects of climate change. We are committed to reducing our greenhouse gas (GHG) footprint, and to engaging constructively with industry peers, value chain partners, external stakeholders, and policymakers to help accelerate the transition to a low-carbon economy. Target also [supports the Paris Agreement](#) and national, regional, and local policy solutions to reduce emissions and build resilience to climate change. [The Science Based Targets initiative](#) has approved our goal to reduce absolute Scope 1, 2 and 3 greenhouse gas emissions by 30 percent below 2017 levels by 2030. We're also committing that 80 percent of our suppliers will set science-based reduction targets on their Scope 1 and 2 emissions by 2023. We'll also use our influence in the market and the products we sell to help drive down emissions. Our efforts are focused in five areas:

- Increasing adoption of renewable energy in [our own operations](#), on [the electricity grid](#), and in our supply chain;
- Driving [energy and water efficiency](#) in our own operations and in our supply chain;
- Investing in innovations supporting the transition to a lower-carbon transportation system, including vehicle electrification;
- Considering climate impacts in raw materials sourcing, particularly the impacts of land use change, and designing plans to mitigate those impacts; and
- Supporting communities most heavily impacted by climate change and building their resilience to climate change impacts like extreme weather events.
